- Python
- SQL
- Matlab

About me

Developer with a strong passion for coding.
Colaborating at Nakshisoft as Game Developer creating an exciting tower defense for Windows in Unity.
Studied a Computer Engineering Degree at UB - Universitat de Barcelona.
Multifaceted programmer with experience in multiple programming languages and technologies such as Unity, RESTful APIs with SpringBoot, Unreal Engine 4, Java JSP, JS Bootstrap or PL/SQL among others and Currently I'm growing by learning Ract.js.
I'm also well versed in the Agile Methodology and used it, although sometimes with a flexible perspective on what Agile means, in most of the projects I've been assigned to as developer.
In a more personal field I enjoy my free time with a wide variety of hobbies like videogames, boardgames, woodworking or inline skating. I also help, with my partner, in local animal shelters by fostering orphaned kittens during the first stages of their lifes until they are ready for adoption.

Work Experience

Salesforce Administrator and Helpdesk

GFT (Sant Cugat) | 01/sep/2023 - 31/jan/2024
